| <b>(1)</b>  | <b><u>General Questions</u></b>                                                                                                                                                                   |
| <b>1.1</b>  | <b>What is “Feed-in Tariff (FiT) Scheme”?</b>                                                                                                                                                     |
| <b>1.2</b>  | <b>What types of Renewable Energy (RE) technologies that generate electricity can receive FiT?</b>                                                                                                |
| <b>1.3</b>  | <b>Who is eligible for the FiT Scheme?</b>                                                                                                                                                        |
| <b>1.4</b>  | <b>My RE system was installed before the launch of the FiT Scheme. Can I participate in the Scheme?</b>                                                                                           |
| <b>1.5</b>  | <b>What are the application procedures and documents required for participating in the FiT Scheme?</b>                                                                                            |
| <b>1.6</b>  | <b>Under what circumstances will the power companies reject FiT applications or approve a generating capacity which is less than that applied for?</b>                                            |
| <b>1.7</b>  | <b>Will the power companies charge any fee?</b>                                                                                                                                                   |
| <b>1.8</b>  | <b>Generally, what is the capital cost of RE systems?</b>                                                                                                                                         |
| <b>1.9</b>  | <b>Are there any recommendations on reputable contractors for RE system installation?</b>                                                                                                         |
| <b>1.10</b> | <b>How to choose solar energy generation systems?</b>                                                                                                                                             |
| <b>1.11</b> | <b>How could the solar energy generation systems be maintained?</b>                                                                                                                               |
| <b>1.12</b> | <b>What is the lifespan of solar energy generation systems and their key components?</b>                                                                                                          |
| <b>1.13</b> | <b>Will the suppliers or contractors of solar energy generation systems provide any warranty and maintenance services?</b>                                                                        |
| <b>1.14</b> | <b>What is the requirement on the electricity system of the building unit for installation of a solar energy generation system under the FiT Scheme?</b>                                          |
| <b>1.15</b> | <b>Do FiT applicants need to obtain permission from other stakeholders prior to their applications to the power companies for participation in the FiT Scheme?</b>                                |
| <b>1.16</b> | <b>Which terms and conditions in the contract do FiT applicants need to pay attention to when entering into a project contract with a solar energy generation system installation contractor?</b> |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>(2)</b> | <b><u>FiT Rates and Payment Arrangements</u></b>                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>2.1</b> | <b>What is the duration of FiT payment?</b>                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>2.2</b> | <b>What are the current FiT rates?</b>                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>2.3</b> | <b>What are the reasons for setting different levels of FiT rates?</b>                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>2.4</b> | <b>Will the FiT rates be adjusted according to inflation or electricity tariff rates?</b>                                                                                                                                                                                                                                                                                                                                                                |
| <b>2.5</b> | <b>How can I get the FiT payment?</b>                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>2.6</b> | <b>If I am a landlord, can I install an RE system on my leased premises and participate in the FiT Scheme?</b>                                                                                                                                                                                                                                                                                                                                           |
| <b>2.7</b> | <b>It is understood that some contractors are working with owners to install solar energy generation systems on the rooftops of the buildings. The contractors will pay for the installation of solar energy generation systems and the income arising from the participation in the FiT Scheme will be shared between the contractors and the owners. Does the Government endorse this form of cooperation and promote it to members of the public?</b> |
| <b>(3)</b> | <b><u>Grid Connection Arrangements and Legislative Requirements in Relation to Installation of RE Systems</u></b>                                                                                                                                                                                                                                                                                                                                        |
| <b>3.1</b> | <b>How would the RE systems connect with the power companies' grids?</b>                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>3.2</b> | <b>Will power companies charge for connecting RE systems to their grids?</b>                                                                                                                                                                                                                                                                                                                                                                             |
| <b>3.3</b> | <b>Are RE systems installed for participation in the FiT Scheme required to be registered with government department? What is the registration procedure?</b>                                                                                                                                                                                                                                                                                            |
| <b>3.4</b> | <b>Is submission of a planning application to the Town Planning Board (TPB) required for the installation of a solar energy generation system? What are the application procedures and assessment criteria?</b>                                                                                                                                                                                                                                          |
| <b>3.5</b> | <b>To cope with extreme weather, how could RE system owners ensure the structural and electrical safety of their solar energy generation systems?</b>                                                                                                                                                                                                                                                                                                    |
| <b>(4)</b> | <b><u>RE Certificates</u></b>                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>4.1</b> | <b>What are "RE Certificates"?</b>                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>4.2</b> | <b>What are the objectives of the RE Certificate Scheme? How does the Scheme operate?</b>                                                                                                                                                                                                                                                                                                                                                                |
| <b>4.3</b> | <b>What is the price for RE Certificates?</b>                                                                                                                                                                                                                                                                                                                                                                                                            |

|      |                                                                                                                                                                                                             |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4.4  | Is participation in the RE Certificate Scheme mandatory?                                                                                                                                                    |
| 4.5  | Who are eligible to purchase RE Certificates?                                                                                                                                                               |
| 4.6  | What are the minimum purchase units of RE Certificates?                                                                                                                                                     |
| (5)  | <u>Installation of solar energy generation systems in New Territories Exempted Houses (NTEHs) (commonly known as village houses)/on vacant land/in private buildings/farms or fish ponds</u>                |
| 5.1  | Will installation of solar energy generation systems constitute unauthorized building works (UBWs) or breaches of planning?                                                                                 |
| (5a) | <u>NTEHs (commonly known as village houses)</u>                                                                                                                                                             |
| 5.2  | What kinds of approval are necessary for the installation of solar energy generation system in a village house? Will such give rise to UBWs?                                                                |
| 5.3  | What are the weight and dimensions requirements for installing solar energy generation system in a village house?                                                                                           |
| 5.4  | Can a solar energy generation system be installed on an extendable structure on the roof of a village house?                                                                                                |
| 5.5  | If a solar energy generation system is installed on the roof of a village house, can the space underneath the system be enclosed? If the enclosure can be easily removed, does it fulfill the requirements? |
| 5.6  | Can a solar energy generation system be installed on the UBWs on the roof of a village house?                                                                                                               |
| 5.7  | Will installation of a solar energy generation system in a village house give rise to breaches of planning?                                                                                                 |
| (5b) | <u>Vacant land in the New Territories</u>                                                                                                                                                                   |
| 5.8  | Will installation of solar energy generation system on vacant land in the New Territories give rise to UBWs?                                                                                                |
| 5.9  | Will installation of a solar energy generation system on vacant land in the New Territories give rise to breaches of town planning?                                                                         |
| 5.10 | Is it necessary to pay fees to the Lands Department (LandsD) when applying for setting up RE installations on vacant land in the New Territories?                                                           |
| (5c) | <u>Private buildings</u>                                                                                                                                                                                    |
| 5.11 | Will installation of solar energy generation system on the rooftop of a private building give rise to UBWs?                                                                                                 |

|      |                                                                                                                                            |
|------|--------------------------------------------------------------------------------------------------------------------------------------------|
| 5.12 | Will installation of a solar energy generation system on the rooftop of a private building give rise to breaches of town planning?         |
| 5.13 | Are vetting and approval from LandsD required for the installation of solar energy generation system on the rooftop of a private building? |
| (5d) | <i>Farms or fish ponds</i>                                                                                                                 |
| 5.14 | Is a planning permission from TPB required for the installation of a solar energy generation system for a farm or fish pond?               |
| (6)  | <u>Schools</u>                                                                                                                             |
| 6.1  | Can schools participate in the FiT Scheme? Is approval from the Education Bureau required?                                                 |
| (7)  | <u>Wind Power Installations</u>                                                                                                            |
| 7.1  | Can building owners install wind turbines in their buildings? What are the procedures involved?                                            |
| (8)  | <u>Tax Incentives and Subsidy Scheme</u>                                                                                                   |
| 8.1  | What tax concession schemes are currently in place to help building owners enhance energy efficiency performance of buildings?             |

## 1) General Questions

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | <b>What is “Feed-in Tariff (FiT) Scheme”?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|            | <p>To encourage the private sector to develop renewable energy (RE), the power generated by RE systems (e.g. solar energy generation systems) can be sold to the power companies at a rate higher than the normal electricity tariff rate under the FiT Scheme. This can help the private sector to recover the costs of investment in the RE systems and power generation.</p> <p>To provide sufficient incentives to potential RE developers, the FiT Scheme adopts “gross FiT” whereby FiT is paid for all units of electricity generated by the RE systems. Any units of electricity used at the premises would be charged at the prevailing tariff rates.</p> |
| <b>1.2</b> | <b>What types of RE technologies that generate electricity can receive FiT?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|            | At present, FiT will be offered to solar and wind energy generation systems.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>1.3</b> | <b>Who is eligible for the FiT Scheme?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|            | <p>Except for government bodies, which are ineligible, all customers of the power companies who plan to install distributed RE systems with a generating capacity of up to 1 Megawatt (MW) at their premises in the respective power company’s supply area are eligible for prescribed FiT rates from that power company based on the units of electricity generated, as long as the distributed RE systems are connected to the grid of the relevant power company.</p> <p>RE systems with a generating capacity exceeding 1 MW will be considered on a case-by-case basis.</p>                                                                                   |
| <b>1.4</b> | <b>My RE system was installed before the launch of the FiT Scheme. Can I participate in the Scheme?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|            | Yes. Distributed RE systems commissioned before the launch of the FiT Scheme are eligible to participate in the FiT Scheme.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| 1.6 | <b>Under what circumstances will the power companies reject FiT applications or approve a generating capacity which is less than that applied for?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|     | <p>While introducing the FiT Scheme, the power companies have to maintain the safe and reliable power supply. In general, the power companies will need to discuss with customers on the generating capacity in individual applications under the following circumstances:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p>(a) The systems under application are located outside the existing network (e.g. uncultivated land). If a network has to be laid, the network may have to route through undeveloped land and roads, and the works and applications involved will be complicated and time-consuming. Moreover, the addition of a network involves relatively large amount of investments, and must also take into account the maintenance of a safe and reliable power supply;</p> <p>(b) There are only basic power supply facilities (such as overhead electricity lines) in the locations where the systems under application are located and the capacity for supplying electricity of the network concerned cannot support the capacity of the systems under application. Enhancement of the network may also be subject to physical constraints (such as in cases where electrical cables have to be laid on private land, consent of the owner(s) of the site(s) concerned have to be obtained; and there may not be sufficient space to accommodate electrical cables with higher capacity if the underground space concerned has already been fully occupied by the facilities of other public utilities, etc.); and</p> <p>(c) Connecting an RE system with a larger capacity or many smaller RE systems densely within the same area to a power company's network will increase the supply voltage and may even exceed the allowable voltage limit of the existing power supply facilities within the area. This may result in voltage instability, and may ultimately affect the stability of power supply to other customers of the same area.</p> |
| <b>1.7</b> | <b>Will the power companies charge any fee?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|            | The power companies will not charge any fee for application and grid connection, except for applications involving alternation, extension, reinforcement or upgrading of power grids.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|            | Capital cost of RE systems varies according to the generating capacity of the systems and RE technology. Generally speaking, the capital cost of a solar energy generation system is around tens of thousands dollars per kilowatt (kW), covering costs of labour and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|             | inspection, structural support, inverter(s) and photovoltaic modules, etc.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>1.9</b>  | <b>Are there any recommendations on reputable contractors for RE system installation?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|             | <p>If you would like to have more information about the contractors that can provide solar energy generation (SEG) installation services, you may refer to the SEG installation contractors list by visiting the following link of the Electrical and Mechanical Services Department (EMSD):</p> <p><a href="https://re.emsd.gov.hk/english/fit/seg/disclamier.html">https://re.emsd.gov.hk/english/fit/seg/disclamier.html</a></p> <p>Please note that the list of SEG installation contractors is for internal use by the EMSD. FiT Scheme applicants should be responsible for identifying suitable contractors for installation of their own SEG systems themselves.</p> <p>Besides, SEG installation contractors are required to appoint registered electrical contractors to carry out the related installation works on the fixed electrical installation. You can refer to the following link to EMSD's website to check the qualifications of the registered electrical contractors:</p> <p><a href="https://www.emsd.gov.hk/en/electricity_safety/registers/registered_electrical_contractors/index.html">https://www.emsd.gov.hk/en/electricity_safety/registers/registered_electrical_contractors/index.html</a></p> |
| <b>1.10</b> | <b>How to choose solar energy generation systems?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|             | <p>Before considering installation of solar energy generation systems, please read the "Technical Guidelines on Grid Connection of Renewable Energy Power Systems (2021 Edition)" and "Guidance Notes for Solar Photovoltaic System Installation (June 2024)" published by EMSD to better understand the technical issues and application procedures relating to grid connection of solar energy generation systems. The relevant Guidelines can be downloaded at the following links:</p> <p>"Technical Guidelines on Grid Connection of Renewable Energy Power Systems (2021 Edition)"</p> <p><a href="https://re.emsd.gov.hk/files/technical_guidelines.pdf">https://re.emsd.gov.hk/files/technical_guidelines.pdf</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

“Guidance Notes for Solar Photovoltaic System Installation (June 2024)”

<https://re.emsd.gov.hk/english/files/PVGuidanceNotes.pdf>

When purchasing solar energy generation systems, you may request suppliers to provide certificates for the design and safety standards for the product and its key components, and confirm that the product has met the relevant international standards, such as those of the International Electrotechnical Commission (IEC). You may request suppliers to provide a written confirmation that the solar energy generation systems have met the following IEC standards and provide appropriate period of warranty:

IEC 61215 - Terrestrial photovoltaic modules - Design qualification and type approval

IEC 61730 - Photovoltaic module safety qualification

IEC updates the standards from time to time and the latest standards can be found at IEC’s website:

<http://www.iec.ch/>

Inverter is a key component of a solar energy generation system. An inverter converts the output direct current (DC) of photovoltaic array into alternating current. It has a power conditioning function to control the harmonic currents and the output power factor of the RE system. The isolation transformer installed inside or outside the inverter helps to prevent the injection of DC into the distribution system. Inverters shall incorporate various functions, including adjusting the voltage and ensuring the safe operation of the RE system, etc. For further details of the various functions, please refer to the “Technical Guidelines on Grid Connection of Renewable Energy Power Systems (2021 Edition)”, which can be downloaded at the following link:

[https://re.emsd.gov.hk/files/technical\\_guidelines.pdf](https://re.emsd.gov.hk/files/technical_guidelines.pdf)

You may request suppliers to provide a written confirmation that the inverters have met the following IEC standards and provide appropriate period of warranty.

|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             | <p>Major IEC Standard for Inverters:</p> <p>IEC62109 - Safety of power converters for use in photovoltaic power systems</p>                                                                                                                                                                                                                                                                                           |
| <b>1.11</b> | <b>How could the solar energy generation systems be maintained?</b>                                                                                                                                                                                                                                                                                                                                                   |
|             | Dust or dirt on the surface of solar panels will reduce the amount of electricity generated. It is recommended that RE system owners should perform simple cleaning work on a regular basis. The inspection, maintenance and repair works of the electrical installations of solar energy generation systems must be carried out by registered electrical contractors.                                                |
| <b>1.12</b> | <b>What is the lifespan of solar energy generation systems and their key components?</b>                                                                                                                                                                                                                                                                                                                              |
|             | The lifespan of solar panels is about 20 to 30 years while that of inverters is about 5 to 10 years.                                                                                                                                                                                                                                                                                                                  |
| <b>1.13</b> | <b>Will the suppliers or contractors of solar energy generation systems provide any warranty and maintenance services?</b>                                                                                                                                                                                                                                                                                            |
|             | Members of the public are recommended to request suppliers or contractors to offer at least one-year defects liability period in the terms of the solar energy generation system project contract. After the expiry of the first defects liability period, members of the public may decide whether they will continue to engage the original contractor or hire a new contractor to provide the maintenance service. |
| <b>1.14</b> | <b>What is the requirement on the electricity system of the building unit for installation of a solar energy generation system under the FiT Scheme?</b>                                                                                                                                                                                                                                                              |
|             | After receiving a FiT application, the power company will carry out a power supply capacity assessment on the electricity system of the unit under application in order to maintain the safety and reliability of power supply. If the unit's power supply capacity cannot support the electricity generation capacity of the applicant's solar energy generation system, the power company may require the           |

|             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             | <p>applicant to increase the power supply capacity of his / her unit in order to maintain the safety and reliability of power supply. For example, if the unit's power supply capacity is 60 Ampere single phase but the electricity generation capacity of the solar energy generation system under application exceeds 60 Ampere single phase or the electricity system's carrying capacity of the unit, depending on circumstances, the power company may require the applicant to increase the power supply capacity of the unit and may even require a three-phase power supply, so as to support the electricity generation capacity of the solar energy generation system for which the applicant applied.</p> |
| <b>1.15</b> | <p><b>Do FiT applicants need to obtain permission from other stakeholders prior to their applications to the power companies for participation in the FiT Scheme?</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|             | <p>Owners and occupants are advised to check any restrictions as may be stipulated in the Deed of Mutual Covenant and to understand whether the installation of solar energy generation systems will affect other residents, and, depending on circumstances, to obtain the agreement from third parties (such as the Owners' Corporation, Mutual Aid Committee or the management company) prior to their FiT applications.</p>                                                                                                                                                                                                                                                                                       |
| <b>1.16</b> | <p><b>Which terms and conditions in the contract do FiT applicants need to pay attention to when entering into a project contract with a solar energy generation system installation contractor?</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|             | <p>In general, the project contract should clearly set out the work flow, equipment specification, maintenance clause and fee payment schedule. At the same time, the project contract should also state clearly whether the contractor will make an FiT application to the power company on behalf of the applicant, check on electricity wiring system and apply for generation facility registration with EMSD, etc.</p> <p>In addition, if the existing power supply of the unit is insufficient, the FiT applicant may be required to upgrade the capacity of power supply, so as to support the generation capacity of the solar energy</p>                                                                     |

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>generation system for which the applicant applied. This may involve additional charges and delays in works. It is advisable to check with the contractor early on about relevant charges for better budgeting.</p> <p>As for the installation specification for solar energy generation systems, EMSD has published “Sample Specification for Installation of Grid-Connected Solar Photovoltaic System” for the public’s reference. It can be downloaded from the following website:</p> <p><a href="https://re.emsd.gov.hk/files/Sample%20Specification%20for%20Installation%20of%20Grid-Connected%20Solar%20Photovoltaic%20System%20Rev1.pdf">https://re.emsd.gov.hk/files/Sample%20Specification%20for%20Installation%20of%20Grid-Connected%20Solar%20Photovoltaic%20System%20Rev1.pdf</a></p> |

| <b>2.3</b> | <b>What are the reasons for setting different levels of FiT rates?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|            | <p>The capital costs of RE systems and costs of power generation vary with the generating capacity of the systems. In general, the larger the generating capacity of an RE system, the lower the average unit cost of installation (on a \$/kW basis) and power generation. Setting different levels of FiT rates can reflect the generating capacity and the levelised cost of electricity more effectively and fairly.</p> <p>Having considered the generating capacity of RE systems that are most likely to be installed in Hong Kong, we consider that it is appropriate to set different levels of FiT rates covering different system sizes. The lowest level (for systems of a capacity <math>\leq 10\text{kW}</math>) will cover most systems that can be installed at rooftop of village houses. The second level (for systems with capacity of <math>&gt;10\text{kW}</math> to <math>\leq 200\text{kW}</math>) will cover systems installed at rooftop of buildings in general (such as the systems at the Airport Police Station and the Wanchai Tower). The third level (for systems with capacity of <math>&gt;200\text{kW}</math> to <math>\leq 1\text{MW}</math>) will include relatively large systems (such as that at the EMSD Headquarters).</p> |
| <b>2.4</b> | <b>Will the FiT rates be adjusted according to inflation or electricity tariff rates?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|            | Upon approval of the FiT application and subject to commencement of operation of the RE system within a reasonable period of time, FiT at the rate applied to the RE system when it joins the FiT Scheme will be offered until 31 December 2033 or throughout the lifespan of the RE system, whichever is the earlier.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>2.5</b> | <b>How can I get the FiT payment?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|            | After the RE system has been successfully connected to the grid and installed with a smart meter, the power company concerned will offer FiT payment according to the amount of electricity generated by the RE system as recorded on the smart meter and release the FiT payments on a regular basis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>2.6</b> | <b>If I am a landlord, can I install an RE system on my leased premises and participate in the FiT Scheme?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|     | The power companies will offer FiT payment according to the amount of electricity generated by an RE system as recorded on the smart meter and release FiT payments to the account holder who has obtained approval for joining the FiT Scheme.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 2.7 | <b>It is understood that some contractors are working with owners to install solar energy generation systems on the rooftops of the buildings. The contractors will pay for the installation of solar energy generation systems and the income arising from the participation in the FiT Scheme will be shared between the contractors and the owners. Does the Government endorse this form of cooperation and promote it to members of the public?</b>                                                                                                                                                                                                                                 |
|     | The Government has noticed that there are companies in the market providing individuals or organisations with different investment models on the installation of solar energy generation systems, including the solar leasing model, under which the companies pay the upfront installation costs for the solar energy generation systems and the income arising from the participation in the FiT Scheme will be shared between the contractors and the owners of the premises. Individuals or organisations who are interested in installing RE systems in their premises may, having regard to their own circumstances, consider different models of participating in the FiT Scheme. |

### **3) Grid Connection Arrangements and Legislative Requirements in Relation to Installation of RE Systems**

|     |                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|     | <p>(PUI), and planning permissions from TPB may be required subject to the provisions of the statutory plan concerned.</p> <p>The proponent may refer to the relevant Outline Zoning Plan and its Notes for land use zoning of the respective site, and whether “PUI” use is always permitted or requires permission from TPB. “PUI” is always permitted in “Commercial”, “Government, Institution or Community”, “Industrial”, “Industrial (Group D)”, “Open Storage”, “Other Specified Uses” annotated “Business” and “Other Specified Uses” annotated “Industrial Estate” zones. Planning application is required for installation of standalone solar energy generation system intended for participation in the FiT Scheme in areas where “PUI” is a Column 2 use under the statutory plan concerned. The “Assessment Criteria for Considering Applications for Solar Photovoltaic System made under Section 16 of the Town Planning Ordinance (Cap. 131)” is available at the following hyperlink:</p> <p><a href="https://www.tpb.gov.hk/en/forms/Technical_Doc/Revised_Assessment_Criteria_Eng_(7.10.2022).pdf">https://www.tpb.gov.hk/en/forms/Technical_Doc/Revised_Assessment_Criteria_Eng_(7.10.2022).pdf</a></p> <p>If a planning permission from TPB is required, the proponent may submit a planning application to TPB in accordance with the Town Planning Ordinance (Cap.131). The application form and Guidance Notes on how to apply can be downloaded from TPB’s website (<a href="https://www.tpb.gov.hk/en/index.html">https://www.tpb.gov.hk/en/index.html</a>). The assessment criteria for considering planning applications for solar energy generation systems are available at:</p> <p><a href="https://www.tpb.gov.hk/en/forms/Technical_Doc/Revised_Assessment_Criteria_Eng_(7.10.2022).pdf">https://www.tpb.gov.hk/en/forms/Technical_Doc/Revised_Assessment_Criteria_Eng_(7.10.2022).pdf</a></p> <p>Please also refer to Question 5.9.</p> |
| 3.5 | <p><b>To cope with extreme weather, how could RE system owners ensure the structural and electrical safety of their solar energy generation systems?</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|     | <p>Owners of solar energy generation systems must ensure that the structural and electrical safety of the solar energy generation systems and statutory requirements required by BD and EMSD should be fully complied with.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

### Structural Safety

Building owners have the responsibility to ensure that the supporting structures for solar energy generation systems are erected lawfully and maintained in a secure and safe condition at all times. In this connection, owners are advised to:

- (a) In case of erecting a supporting structure for a solar energy generation system, comply with the requirements under the Buildings Ordinance (Cap. 123), or, if the building is a village house exempted under the Buildings Ordinance (Application to the New Territories) Ordinance (Cap. 121), comply with the requirements for the erection of green and amenity facilities as stipulated by LandsD and BD;
- (b) Conduct regular inspections on the supporting structures for the solar energy generation system and if required, carry out timely repair and maintenance; and
- (c) Before and after severe weather, such as a typhoon, appoint a prescribed building professional or prescribed registered contractor to conduct inspection on the supporting structures for the solar energy generation system, including the connection between the solar panels and the structures. In particular at the approach of typhoon season, consideration should also be given to introducing additional precautionary measures (e.g. installation of tie wires) to enhance the safety of the solar energy generation systems.

### Electrical Safety

Under Section 22 of the Electricity Ordinance (Cap. 406), the owner of a registered generating facility shall maintain the generating facility in continuous safe working order, and display at the facility a notice showing the name and registration number of the registered electrical contractor employed for maintaining the facility in continuous safe working order. Therefore, the suggestions listed below would be helpful to ensure electrical safety:

- (a) Conduct regular visual inspections on solar energy generation systems (e.g. solar panels, associated electrical installations, etc.);

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

#### 4) RE Certificates

|            |                                                                                                                                                                                                                                                                                                                                                                     |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>4.1</b> | <b>What are “RE Certificates”?</b>                                                                                                                                                                                                                                                                                                                                  |
|            | RE Certificates are sold by the power companies. Each unit of electricity in the RE Certificates represents units of electricity produced by local RE sources that are either generated or purchased by the power companies.                                                                                                                                        |
| <b>4.2</b> | <b>What are the objectives of the RE Certificate Scheme? How does the Scheme operate?</b>                                                                                                                                                                                                                                                                           |
|            | Selling RE Certificates will help enhance public awareness of environmental protection. Through the purchase of RE Certificates, the community can show its support to the development of RE. The revenue from selling the RE Certificates will also help alleviate the overall tariff impact on all consumers brought about by the introduction of the FiT Scheme. |
| <b>4.3</b> | <b>What is the price for RE Certificates?</b>                                                                                                                                                                                                                                                                                                                       |
|            | The price of RE Certificates is HK\$0.5/kWh.                                                                                                                                                                                                                                                                                                                        |
| <b>4.4</b> | <b>Is participation in the RE Certificate Scheme mandatory?</b>                                                                                                                                                                                                                                                                                                     |
|            | Participation in the RE Certificate Scheme is on a voluntary basis.                                                                                                                                                                                                                                                                                                 |
| <b>4.5</b> | <b>Who are eligible to purchase RE Certificates?</b>                                                                                                                                                                                                                                                                                                                |

|            |                                                                                                                                              |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------|
|            | Any residential or commercial and industrial customer in the respective power company's supply area is eligible to purchase RE Certificates. |
| <b>4.6</b> | <b>What are the minimum purchase units of RE Certificates?</b>                                                                               |
|            | The RE Certificates are available at a minimum purchase of 100 units.                                                                        |

**5. Installation of solar energy generation systems in New Territories Exempted Houses (NTEHs) (commonly known as village houses)/on vacant land/in private buildings/farms or fish ponds**

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>5.1</b> | <b>Will installation of solar energy generation systems constitute unauthorized building works (UBWs) or breaches of planning?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|            | <p>If the installation of solar energy generation systems complies with the requirements of the law, it will not give rise to UBWs.</p> <p>If you plan to install solar energy generation systems in NTEHs (commonly known as village houses), please refer to Questions 5.2 - 5.7.</p> <p>If you plan to install solar energy generation systems on vacant land, please refer to Questions 5.8 - 5.10.</p> <p>If you plan to install solar energy generation systems in private buildings, please refer to Questions 5.11 - 5.13.</p> <p>If you plan to install solar energy generation systems in farms or fish ponds, please refer to Question 5.14.</p> |

**5a) NTEHs (commonly known as village houses)**

|            |                                                                                                                                                     |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>5.2</b> | <b>What kinds of approval are necessary for the installation of solar energy generation system in a village house? Will such give rise to UBWs?</b> |
|            | According to the policies of the LandsD and the BD on Green and Amenity Facilities in NTEHs, upon fulfilling specific requirements,                 |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p>a resident may install solar energy generation system on the rooftop and stairhood of a village house without the need to obtain prior approval from LandsD or BD.</p> <p>If the garden adjacent to a village house is privately owned or situated on a site under short term tenancy which is in conformity/compliance with the relevant land use and lease or tenancy conditions, the relevant owner or tenant may install supporting structures for solar energy generation systems in accordance with the simplified requirements under the Minor Works Control System under the Buildings Ordinance (BO) (Cap.123) (i.e. Minor Works Item No. 1.50 (<a href="https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item1_50.html">https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item1_50.html</a>) or Item No. 3.50 (<a href="https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item3_50.html">https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item3_50.html</a>)) by appointing a prescribed building professional and/or prescribed registered contractor to carry out the works to ensure that the relevant minor works comply with the requirements of the BO.</p> <p>If the building works involved are not exempted building works or minor works items, the relevant owner or tenant should appoint an Authorized Person to submit building plans to BD in accordance with the BO. The building works can only be carried out after approval for and consent to the commencement of works are obtained.</p> <p>In addition, the design and construction of individual village houses may be different. Village house owners should first consult professionals before the solar energy generation systems are installed.</p> |
| <b>5.3</b> | <b>What are the weight and dimensions requirements for installing solar energy generation system in a village house?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|            | <p>If a solar energy generation system arranged in the form of continuous spread covering is installed on the main roof, its coverage should not be more than half of the roofed-over area of the NTEHs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p>If a solar energy generation system arranged in clusters is installed on the main roof, each cluster should have coverage of not more than 5 m<sup>2</sup> and should be separated from each other by not less than 1 m.</p> <p>Besides, for systems to be installed on the main roof, the average loading should not exceed 150 kg/m<sup>2</sup>. For facilities to be installed on the roof of a stairhood, the average loading should not exceed 75 kg/m<sup>2</sup>.</p> <p>Requirements for installation of solar energy generation system in a village house have been given in the “Building New Territories Exempted Houses” pamphlet (<a href="https://www.landsd.gov.hk/doc/en/small-house/Building%20NT%20Exempted%20Houses_e.pdf">https://www.landsd.gov.hk/doc/en/small-house/Building%20NT%20Exempted%20Houses_e.pdf</a>) published by the LandsD and the “Correct Installation of Photovoltaic (PV) System on Village Houses” pamphlet (<a href="https://www.bd.gov.hk/doc/en/resources/pamphlets-and-videos/CIPVSVH_e.pdf">https://www.bd.gov.hk/doc/en/resources/pamphlets-and-videos/CIPVSVH_e.pdf</a>) published by BD.</p> |
| <b>5.4</b> | <b>Can a solar energy generation system be installed on an extendable structure on the roof of a village house?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|            | <p>The coverage area of a solar energy generation system on the roof is the total area covered by the whole solar energy generation system, including the solar panels, the supporting frame and any uncovered space or gap between the solar panels within the building. If an extendable structure is involved, the total coverage area of the fully extended solar energy generation system should be measured.</p> <p>In this connection, for a solar energy generation system arranged in the form of continuous spread covering to be installed on an extendable structure, if the coverage area measured when the system is fully extended exceeds half of the roofed-over area of the NTEHs, the system does not comply with the requirements and will be considered as UBWs. The owners should also pay particular attention to and ensure the structural safety of the extendable structure and the safety of the electrical installations on it.</p>                                                                                                                                                                                   |
| <b>5.5</b> | <b>If a solar energy generation system is installed on the roof of a village house, can the space underneath the system be enclosed? If the enclosure can be easily removed, does it fulfill the requirements?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | No, the space underneath a solar energy generation system should not have any fixed or demountable enclosures. It does not satisfy with relevant requirements when such space is fully or partially enclosed by any fixed or movable components constructed of canvas, metal or glass or solar panels and equipment associated with the solar energy generation system. It is necessary to avoid such space being enclosed when designing the arrangement of solar panels.           |
| <b>5.6</b> | <b>Can a solar energy generation system be installed on the UBWs on the roof of a village house?</b>                                                                                                                                                                                                                                                                                                                                                                                 |
|            | No. According to the requirements, the roof on which a solar energy generation system would be installed should be cleared of all UBWs, including those declared to and acknowledged by BD under the Reporting Scheme for UBWs in NTEHs implemented by BD. Therefore, a solar energy generation system installed on the UBWs on the roof will also be regarded as UBWs. BD will take enforcement actions in accordance with the enhanced enforcement strategy against UBWs in NTEHs. |
| <b>5.7</b> | <b>Will installation of a solar energy generation system in a village house give rise to breaches of planning?</b>                                                                                                                                                                                                                                                                                                                                                                   |
|            | Generally speaking, if the solar energy generation system to be installed on the rooftop of a village house is primarily an ancillary facility for supplementing power supply to the household, the installation is not in contravention of the relevant planned use.<br><br>Please also refer to Question 3.4.                                                                                                                                                                      |

*5b) Vacant land in the New Territories*

|            |                                                                                                                                                                                                                                                                                                                                                       |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>5.8</b> | <b>Will installation of solar energy generation system on vacant land in the New Territories give rise to UBWs?</b>                                                                                                                                                                                                                                   |
|            | If the vacant land in the New Territories is privately owned or within an area of short term tenancy and the installation of the solar energy generation system is in conformity/compliance with the relevant land lease or tenancy conditions, the relevant owner or tenant may install supporting structures for solar energy generation systems in |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p>accordance with the simplified requirements under the Minor Works Control System under the BO (i.e. Minor Works Item No. 1.50 (<a href="https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item1_50.html">https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item1_50.html</a>) or Item No. 3.50 (<a href="https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item3_50.html">https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item3_50.html</a>)) by appointing a prescribed building professional and/or prescribed registered contractor to carry out the works to ensure that the relevant minor works comply with the requirements of the BO. Otherwise, the owner or tenant should apply to LandsD for short-term waiver (for private lot) or amendment of the tenancy conditions (for short term tenancy) prior to the installation works.</p> <p>If the building works involved are not exempted building works or minor works items, the relevant owner or tenant should appoint an Authorized Person to submit building plans to BD in accordance with the BO. The building works can only be carried out after approval for and consent to the commencement of works are obtained.</p> |
| <b>5.9</b> | <b>Will installation of a solar energy generation system on vacant land in the New Territories give rise to breaches of town planning?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|            | <p>Installation of a solar energy generation system as a standalone facility on vacant land for participation in the FiT Scheme would be regarded as “Public Utility Installation” which is always permitted in “Commercial”, “Government, Institution or Community”, “Industrial”, “Industrial (Group D)”, “Open Storage”, “Other Specified Uses” annotated “Business” and “Other Specified Uses” annotated “Industrial Estate” zones. Planning application is required for installation of standalone solar energy generation system intended for participation in the FiT Scheme in areas where “Public Utility Installation” is a Column 2 use under the statutory plan concerned. The “Assessment Criteria for Considering Applications for Solar Photovoltaic System made under Section 16 of the Town Planning Ordinance (Cap. 131)” is available at the following hyperlink:</p> <p><a href="https://www.tpb.gov.hk/en/forms/Technical_Doc/Revised_Assessment_Criteria_Eng_(7.10.2022).pdf">https://www.tpb.gov.hk/en/forms/Technical_Doc/Revised_Assessment_Criteria_Eng_(7.10.2022).pdf</a></p>                                                                                                                                                                                                                     |

|             |                                                                                                                                                                                                                                                                                                                                             |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             | Please also refer to Question 3.4.                                                                                                                                                                                                                                                                                                          |
| <b>5.10</b> | <b>Is it necessary to pay fees to LandsD when applying for setting up RE installations on vacant land in the New Territories?</b>                                                                                                                                                                                                           |
|             | The waiver of application fee for setting up RE installations on private agricultural land in the New Territories is set according to the established fee level of LandsD, and the fee for individual site depends on factors like its size, location and the land lease terms. Therefore, it is difficult to generalise the fees required. |

| <b>5.11</b> | <b>Will installation of solar energy generation system on the rooftop of a private building give rise to UBWs?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|             | <p>Installation of supporting structures for solar energy generation systems on the rooftops of private buildings can be carried out in accordance with the simplified requirements under the Minor Works Control System under the BO (i.e. Minor Works Item No. 1.50 (<a href="https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item1_50.html">https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item1_50.html</a>) or Item No. 3.50 (<a href="https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item3_50.html">https://www.bd.gov.hk/en/building-works/minor-works/minor-works-items/index_mwcs_item3_50.html</a>)) by appointing a prescribed building professional and/or prescribed registered contractor to carry out the works to ensure that the relevant minor works comply with the requirements of the BO.</p> <p>If the building works involved are not exempted works or minor works items, the relevant owner or tenant should appoint an Authorized Person to submit building plans to BD in accordance with the BO. The building works can only be carried out after approval for and consent to the commencement of works are obtained.</p> |
| <b>5.12</b> | <b>Will installation of a solar energy generation system on the rooftop of a private building give rise to breaches of town planning?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|             | Generally speaking, if the solar energy generation system installed on the rooftop of a private building is primarily an ancillary facility                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|             |                                                                                                                                                                                                                                                                        |
|-------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             | <p>for supplementing power supply to the building or the households therein, the installation is not in contravention of the relevant planned use.</p> <p>Please also refer to Question 3.4.</p>                                                                       |
| <b>5.13</b> | <b>Are vetting and approval from LandsD required for the installation of solar energy generation system on the rooftop of a private building?</b>                                                                                                                      |
|             | <p>Generally speaking, the installation of RE systems in existing buildings should comply with the relevant land lease conditions. Otherwise, the owner has to apply to LandsD for modification of the lease conditions or waiver prior to the installation works.</p> |

#### 5d) Farms or fish ponds

|             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>5.14</b> | <b>Is a planning permission from TPB required for the installation of a solar energy generation system for a farm or fish pond?</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|             | <p>Installation of a solar energy generation system for generating electricity for a permitted use, such as that for a farm, green house/farm structures in the “Agriculture” zone to be used mainly for generating electricity for agricultural purposes, is regarded as an ancillary use. No planning permission from TPB is required.</p> <p>A stand-alone solar energy generation system installed on vacant land for the FiT Scheme is regarded as “PUI” and a planning permission from TPB may be required subject to the provisions of the statutory plan concerned.</p> <p>Please also see Question 3.4.</p> |

### **6. Schools**

|            |                                                                                                                                            |
|------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| <b>6.1</b> | <b>Can schools participate in the FiT Scheme? Is approval from the Education Bureau (EDB) required?</b>                                    |
|            | <p>In principle, kindergartens as well as primary and secondary schools (except government schools) can participate in the FiT Scheme.</p> |

|  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p>Schools need to fulfil relevant requirements as set out in the circular memorandum issued by EDB when participating in the Scheme. The circular memorandum can be viewed via the following link:</p> <p><a href="https://applications.edb.gov.hk/circular/upload/EDBCM/EDBCM19168E.pdf">https://applications.edb.gov.hk/circular/upload/EDBCM/EDBCM19168E.pdf</a></p> <p>Universities funded by the University Grants Committee (UGC), non-UGC funded universities and post-secondary institutions (such as Vocational Training Council) can also apply for the FiT Scheme.</p> |

|  | <p>course of a business, or participating in the FiT Scheme for profit purposes, they are required to report in the tax return the FiT payments derived from selling units of electricity generated by the RE systems to the power companies and apply for a business registration for their FiT business.</p> <p>To encourage the business community to adopt environmental protection facilities, since the year of assessment 2008-09, pursuant to section 16I of the Inland Revenue Ordinance, profits tax deduction has been allowed for the capital expenditure incurred in relation to environmental protection facilities. As mentioned in the 2018-19 Budget, the Government has already further enhanced tax concessions for capital expenditure incurred by enterprises in procuring eligible energy efficient building installations and RE systems by allowing the capital expenditure so incurred to be deductible in full in one year instead of five years. Details can be referred to the press release issued by the Government on 1 March 2018:</p> <p><a href="http://www.info.gov.hk/gia/general/201803/01/P2018030100661.htm?fontSize=1">http://www.info.gov.hk/gia/general/201803/01/P2018030100661.htm?fontSize=1</a></p> |
